

National Severe Weather Warning Service

Chief Forecasters Assessment

Heavy showers are expected to affect the area at times as a low pressure area continues slowly eastwards. 10 to 20 mm may fall locally, although accumulations will be very variable with most parts seeing less. Nevertheless, this may exacerbate recent flooding problems.

This is an update to earlier issue, with more emphasis on the lesser amounts and localised nature of today's rainfall, and also a reduction of the area at risk from heavy rainfall, with parts of south Wales, Somerset, Wiltshire, east Devon and North Dorset no longer included. Note that despite the reduction in rainfall across the areas just referred to, flooding issues may still be encountered.

The Met Office have issued a **Yellow Warning of Rain**

Valid from **11:45 on Mon, 26th Nov 2012** until **22:00 on Mon, 26th Nov 2012**

Showers, some of them heavy, are expected to affect the area at times during Monday, mostly dying out later, although perhaps persisting towards west Cornwall.

The rainfall will not be as persistent, nor as heavy, as on recent days but nevertheless, given the saturated nature of ground, the public should be aware of the possibility of further localised flooding and disruption to travel.
